

CMS Roofing: What I Found and What I'd Do

For: Jaron Jagers

From: Charles Sherwood

September 2026

Everything in this brief came from the outside: your website, your listings, your reviews, your social pages, and your competitors. I haven't seen your CRM, your numbers, or your team yet, so treat this as a starting point. Even from the outside, a few things stand out.

What's working

You have credentials most roofers in your market can't claim. You're GAF Master Elite, Versico certified for commercial work, and a FORTIFIED provider. You've been BBB accredited since 2012, and you back your work with a 25-year workmanship warranty. You have two offices and 20 years of history. Your reviews name your people (Jason, Bryce, the crew leads), which tells me customers remember who they dealt with.

One of your customers quoted an ad of yours: *"Metal for the price of asphalt."* That's a great offer. I couldn't find it anywhere on your website.

Your website's foundation is better than most. Every page has a proper search title, the homepage tells Google exactly what business you are, and three pages carry FAQ markup that can show up directly in search results. Someone did good work there recently.

The foundation is strong. Most of what follows is about getting more out of what you already have.

What I found

1. Your Google Ads tracking is wired to a website you don't have anymore.

Your site loads a Google Ads account (ID 1036689461) with 12 conversion actions and 2 remarketing tags. I read through what each one fires on.

- **Tracked:** phone-number clicks. The "Schedule Now" button is too, but it only appears on your About page.

- **Pointed at things that no longer exist:** at least seven actions are waiting for things that aren't on the current site. That includes a "Make a payment" button, a "Send us a file" button, "Click to schedule service now," "We'd love to hear from you," a /submission-

success page, and clicks on jaron@cmsroofing.com (the site now shows office@).

- **Not tracked:** I couldn't find anything that records a completed contact form.

- **Dead tag:** a Universal Analytics tag is still loading, and Google shut that product down in 2024.

If ads are running today, Google is optimizing toward phone clicks only and can't see a single form lead. Whatever the reports say about cost per lead is probably wrong.

2. The site is slow on a phone, and the tracking is part of why.

I ran Google's own speed test (Lighthouse) on your homepage in mobile mode. It scored 52 out of 100. The main image and headline took 5.2 seconds to appear, and Google considers anything over 2.5 seconds poor. The page was frozen and unresponsive for about 1.7 seconds while it loaded. Google Tag Manager alone accounted for about 1.25 seconds of that. Cleaning up the dead tags in finding #1 fixes part of this for free.

3. Leads that come in through the website get no response until someone sees the email.

Your contact form has its auto-reply switched off, so a homeowner who fills it out at 7pm gets nothing back. The form only asks for name, email, phone, and a message. It doesn't ask for the property address, what they need, or whether there's an insurance claim, so someone has to call back just to find out what the job is. Your listed hours are Monday to Friday, closed weekends. Storm damage doesn't keep those hours, and neither do homeowners comparing three roofers.

There's also a small thing: the email address printed in your website footer has an invisible character hidden in the middle of "cmsroofing." Clicking it works fine. But if someone copies and pastes it into their email, the address will likely fail.

4. Google sees two different companies.

Your website and BBB list 308 Old Scottsville Rd. Birdeye, Nextdoor, and the builders association list 384. The website phone is 270-843-5405, and BBB has 270-784-4757. Your start year shows up as 2005 in one place and 2006 in another. Google uses this kind of consistency to decide who shows up in the map results for "roofer near me," and right now it's getting mixed signals. The Birdeye profile hasn't been claimed.

5. Your reviews are good but not winning.

You have about 100 Google reviews at roughly 4.2 stars. That's more than Hale (about 14) or Keen (about 49), but they sit at 4.4 and 4.7. The negative reviews mostly mention finish work and warranty follow-through. I couldn't find public replies to them. A calm, specific reply to a bad review does more for the next customer than the review does harm.

6. There's no financing on the website.

An unplanned replacement is a big number for most homeowners, and a monthly payment is often what gets it signed this month instead of next year. Best Choice Roofing, the national company with a Bowling Green office, puts financing and same-day inspections up front.

7. No paid social.

Nothing is running in the Meta Ad Library under CMS Roofing & Restoration. That means no storm-response ads after hail, no reminders to people who visited the site and didn't book, and no financing message. It also means you haven't wasted money there, so we'd be starting clean.

8. LinkedIn is talking to the wrong people.

The company page has 105 followers. The profile image is a cropped logo with white bars, there's no banner, and the last post was homeowner tips about summer heat.

Homeowners aren't on LinkedIn. Commercial property owners, facility managers, realtors, insurance agents, and the people you'd want to hire are. That page is also the first place a commercial prospect will look after hearing from you. On top of that, your Facebook logo is a different design from your LinkedIn and website logos.

9. The commercial side isn't being sold.

Versico certification plus GAF Master Elite is a real edge for flat and low-slope work, and commercial jobs come in bigger and repeat. Your commercial page explains TPO, EPDM, and modified bitumen in general terms. It doesn't show a single named project, square footage, or before-and-after. The Our Work page is about 200 words of category labels. A facility manager deciding on a \$200,000 roof wants to see one that looks like theirs. And nothing goes out and finds that work.

10. Most of your service area has no page.

Bowling Green and Owensboro have their own pages. Elizabethtown, Franklin, Glasgow, Portland, Russellville, and Smiths Grove don't. Those are searches you're not showing up for.

What I can't see yet

The outside view only goes so far. The questions that matter most are inside:

- How many leads come in a month, from where, and how many turn into inspections?
- What's your close rate, and does it change by rep or by lead source?

- How many estimates went out in the last 12 months that never signed, and what are they worth?
- What does a customer cost you by channel, and what is that customer worth over time with repairs, gutters, siding, and referrals?
- How much can your crews actually install between now and spring?

Those answers decide where the first dollar goes. That's why the plan below starts with the numbers.

What I'd do: 90 days, three phases

Phase 1: Know the numbers (weeks 1–4)

I'd spend the first weeks in your data and with your team, remotely. That means pulling every lead, estimate, and job, and listening to recorded calls to hear how they get handled. I'd also do a video walk-through with an estimator on a live inspection, and have screen-share sessions with whoever runs the office.

You'd get one report that tells the story of your revenue: where it comes from, where it leaks, and what each lead source is really worth. It covers cost per lead, cost per appointment, cost per customer, gross profit per lead, lifetime value, and how long it takes a lead to turn into cash. You'd also get a live dashboard that keeps those numbers current, and a ranked list of the five biggest leaks with a dollar figure on each.

We'd also agree on how each sale gets credited to a source. Otherwise the dashboard can't be trusted.

Phase 2: Fix what you already have (weeks 3–8)

We'd work the leak list in order. Based on what I've seen, it probably looks like this:

- **Speed:** every web lead and missed call gets a text within a minute and a call within five. After-hours calls get answered and flagged so an urgent leak doesn't wait until Monday.
- **Follow-up on estimates that didn't sign:** a written sequence with financing and proof, and a simple "where are you at?" message that gets people to answer. This is usually the fastest money in a roofing company, because those people already let you on the roof.
- **Your database:** a check-in to every old lead that never bought, and a yearly check-up offer and referral ask to past customers. You've done thousands of roofs.

- **Cleanup:** one address and phone everywhere, review replies, a better form, financing on the site, and a LinkedIn page aimed at commercial buyers, partners, and hires.
- **AI where it saves real time:** call summaries into the CRM, drafted replies and follow-ups, and lead scoring. A person approves anything a customer sees.

Phase 3: Build a second lead source and test it (weeks 7–13)

With the basics running, I'd start outbound to commercial property owners, facility managers, and property managers, on email and LinkedIn. It would run as a real test instead of a blast.

There are two offers. **Offer 1** is a full reroof: a free condition report and a written replacement budget. **Offer 2** is a maintenance plan: two inspections a year, priority leak response, and a report after every visit. The question behind the test is whether commercial owners respond more to *reducing risk* than to *a capital project*. I suspect the maintenance plan opens more doors and leads to the reroof later, but the test decides.

Each offer gets tested with five different messages:

	Clear pitch	Free guide	Video of their roof	Local contractor	Timely reason
Full reroof	1A	1B	1C	1D	1E
Maintenance plan	2A	2B	2C	2D	2E

We'd run the tests one variable at a time and read the results against your current inbound, using the same numbers from Phase 1. Outbound has to earn its budget like anything else. Bowling Green and Owensboro aren't big markets, so every contact counts and nobody gets hit twice.

Your timing is good for this. Commercial owners set next year's budgets in the fourth quarter, and "before next year's budget is set" is a real reason to talk now. Winter is also when residential slows down, which makes it the right time to get the systems running before spring storm season.

Week by week

Week	What happens	What you get
1	Access to the CRM, phone system, Google Ads, Analytics, Tag Manager, and Google Business Profile. Export every lead, estimate, and job. Agree on attribution rules. Turn on the form auto-reply (a five-minute fix).	Everything connected, and the first leak closed
2	Clean and tag the data: source, job type, and won/lost. Listen to 20 recorded calls. Video walk-through of a live inspection with an estimator. Audit every Google Ads conversion.	A clean list of every lead and job
3	Build the numbers: cost per lead, per appointment, and per customer; gross profit per lead; close rate by rep and source; time from lead to cash; crew capacity.	First draft of the dashboard
4	Write the State of Revenue report and walk you through it on a video call. Rank the top 5 leaks with a dollar figure on each.	The report, the dashboard, and the priority list
5	Rebuild Google tracking so every form, call, and booking is counted, and remove the dead tags. Rebuild the form. Instant text-back and missed-call text-back go live.	Every lead tracked and answered within minutes
6	The unsigned-estimate follow-up goes live. Send the "are you still looking?" message to every old lead. Fix listings and claim Birdeye. Start replying to reviews.	Recovered-revenue tracking starts
7	Past-customer check-up and referral campaign. Rebuild the LinkedIn page and Jaron's profile. Financing on the site. Buy and warm up the outbound email domains.	Your database working for you
8	AI call summaries and drafted replies. Pull the commercial lists from county records. Draft the lead magnets and the condition-report template. Record the first Loom videos.	Phase 2 review: before vs. after
9–10	Outbound round 1: full reroof vs. maintenance plan (1A vs 2A) to commercial owners. Replies handled the same day, with two meeting times offered.	First commercial conversations
11–12	Round 2: the stronger offer across the other four messages. LinkedIn goes live alongside email. City pages for Franklin, Glasgow, and Russellville.	Condition reports on the calendar
13	Day-90 review. Recovered revenue, pipeline dollars, and every channel compared on the same numbers. Plan for the next quarter.	The day-90 decision

Every Friday you get a one-page update: what moved, why, and what's next week.

What 90 days can realistically get you

I won't promise a revenue number before I've seen your data. What I can tell you is where results usually show up first.

Inside 90 days: revenue recovered from estimates that didn't sign, old leads, and past customers. These people already know you, which is why it's the fastest. You'd also get faster response to new leads, clean numbers you can forecast from, and systems that keep running after the sprint.

Starting in 90 days, closing over the next several months: commercial pipeline. That means condition reports done, proposals out, and maintenance plans started. Commercial decisions follow budgets and boards, so the big reroofs usually sign after the first 90 days. The goal for day 90 is a pipeline you can see.

How we'd work together

I'm in New Mexico and I work fully remote. That's how I've always worked, and nearly everything in this plan is remote by nature: the data, the CRM, the dashboard, the automations, and the outbound. Here's how the rest works:

- **One point person at CMS.** Someone in the office who is my eyes on the ground and gets things done locally.
- **A standing weekly video call** with you on the numbers, plus a short written update every Friday.
- **Anything in person is done by your people.** That means inspections, condition reports, drop-offs, and local networking. Any hires would be Bowling Green and Owensboro people. I'd build their playbook, train them over video with recorded walkthroughs they can rewatch, and track their numbers with them every week.
- **I'm an hour behind you,** so I work on Central time.

Here's what I'd propose for the 90-day sprint:

- **\$5,000 a month**
 - **5% of collected revenue from work I directly generate.** That covers recovered estimates and leads, past-customer campaigns, and new outbound, tracked in the CRM. Your normal inbound doesn't count.
 - **Deals sourced during the sprint that close within six months afterward still count,** because commercial takes longer.
 - **Tools are billed at cost** (usually a few hundred dollars a month).
 - **At day 90, we decide together** whether to keep going, move to a full-time role, or wrap up. Whatever gets built stays with CMS either way.
-

Next step

A 30-minute call. I'll walk you through what I found, and I'd like to hear where you want the business to be in 12 months: revenue, commercial versus residential, crews, and the jobs you want more of. If Phil wants to be on it, even better.

Charles Sherwood

Appendix: the evidence

Everything above can be checked. Here's where each finding came from.

Google tracking (from your site's Tag Manager container, GTM-5XW9M9G)

Item	What it is	Status
Google Ads account 1036689461	12 conversion actions, 2 remarketing tags	Loads on every page
Phone-click conversion (270-843-5405)	Fires when someone taps the number	Working
"Schedule Now" click	Button conversion	Only on the About page
"Make a payment," "Send us a file," "We'd love to hear from you," "Click to schedule service now"	Button-text conversions	Those buttons aren't on the current site
/submission-success page view	Form "thank you" page conversion	That page isn't on the current site
jaron@cmsroofing.com click	Email conversion	The site shows office@cmsroofing.com
Universal Analytics (UA-10518128-1)	Old Google Analytics	Shut down by Google in 2024; still loading
GA4 (G-Y49K561Q95)	Current Google Analytics	Loading

Mobile speed (Google Lighthouse, homepage, mobile mode)

Measure	Result	Google's "good"
Performance score	52 / 100	90+
Main content visible (LCP)	5.2 s	under 2.5 s
Time the page is frozen (TBT)	1.67 s	under 0.2 s
Of that, caused by Tag Manager	about 1.25 s	
Page size	1.9 MB	
Unused JavaScript	about 640 KB	

Listings

Where	Address	Phone
Website, BBB	308 Old Scottsville Rd	270-843-5405 (site), 270-784-4757 (BBB)
Birdeye (unclaimed), Nextdoor, BASCKY	384 Old Scottsville Rd	270-843-5405

Reviews (Birdeye aggregate of Google)

Company	Reviews	Rating
CMS Roofing & Restoration	about 100	about 4.2
Keen Roofing	about 49	about 4.7
Hale Roofing	about 14	about 4.4

Social

- **Meta Ad Library:** no active ads under CMS Roofing & Restoration.
- **LinkedIn:** 105 followers, 11–50 employees, no banner, letterboxed logo, last post about a month ago (homeowner content).
